

Weaving Aquarius MSABP Membranes

Pex Industries has been providing advanced water treatment solutions to industrial and municipal clients around the World for over 30 years.

In a joint venture with Aquarius, we also design and manufacture the no waste sludge MSABP activated biological treatment system, ELCAT for toxic and non-biodegradable waste streams and diffused aeration technology.

Our coarse and fine bubble aeration technologies are used with the MSABP as well as conventional diffused aeration applications. Significant improvements in piping components and performance of the fine bubble diffuser have set a new standard in aeration technology.

We regard investment in research and development as a key to the continued advancement of wastewater treatment technologies.

A group of dedicated engineers, scientists and other professionals focus on continuous improvement in providing cost-effective solutions to wastewater treatment problems. Joint ventures with other dedicated professionals ensure that when our technology is considered, these professional begin the task of working with the project team to tailor a custom solution, specific to the client's needs.

Extensive experience in design, build and operation of Desalination, Reverse Osmosis and Waste Water Treatment plants to the Pacific region and USA, as well as Europe, Africa and the Middle East, have allowed us to become leaders in the field. Using various technologies for custom built projects, we offer total turnkey ability. We are also able to offer long term operations and maintenance contracts.
